## IN THE CLAIMS:

Please cancel Claims 2 and 4, without prejudice to, or disclaimer of, the subject matter recited therein. Please amend Claims 1, 3 and 5, and add new Claims 7-10, as follows.

- 1. (Currently Amended) An optical element comprising:
- a substrate;
- a first diffraction grating which is formed of titanium, or a compound thereof, disposed on the substrate and having a period that is shorter than a light wavelength used; and

a second diffraction grating which is formed of aluminum, disposed on the first diffraction grating and having a period that is shorter than the light wavelength used,

wherein the melting point of a material of the first diffraction grating is higher than the melting point of a material of the second diffraction grating.

- 2. (Canceled)
- 3. (Currently Amended) An optical element according to Claim 1, wherein a diffusion coefficient of the material of the first diffraction grating is greater less than a diffusion coefficient of the material of the second diffusion grating.
  - 4. (Canceled)

- 5. (Currently Amended) An optical element according to Claim 1, wherein a thin MgF<sub>2</sub> or Na<sub>3</sub>AlF<sub>6</sub> film that has a smaller refractive index than the substrate is disposed between the substrate and the first diffraction grating.
- 6. (Original) An optical element according to Claim 1, wherein each grating period that is shorter than the light wavelength used falls in a range of from at least 30 nm to 200 nm at most.
- 7. (New) An optical element according to Claim 5, wherein the thin film is formed of MgF<sub>2</sub>.
- 8. (New) An optical element according to Claim 1, wherein the first diffraction grating is formed of titanium nitride.
- 9. (New) An optical element according to Claim 1, further comprising a third diffraction grating which is formed of titanium, or a compound thereof, disposed on the second diffraction grating.
- 10. (New) An optical element according to Claim 1, further comprising an optical member for protecting the first and second diffraction gratings, which is disposed over the second diffraction grating with a predetermined space.
